

Creating a New Site Definition with FTP in Dreamweaver

1. From the Site menu, select "New Site..."
2. Click the "Advanced" tab. (Dreamweaver MX only)
3. Enter information as described below:

Local Info

- Site Name: Your own reference name for the site definition.
- Local Root Folder: Click the folder icon to browse to and select the local folder you are using to store web files for the site.
- HTTP Address: http://www.sandi.net/enter_host_directory_name_here
- Cache: Check to enable cache

Remote Info

- Access: Select "FTP" from the dropdown
- FTP Host: <ftp-www.sandi.net>
- Host Directory: enter host directory name provided
- Login: enter user account name provided
- Password: enter password provided
- Check the "Save" box to save the Login and Password information.
- Do **NOT** check the "Use passive FTP," "Use firewall" or "Use Secure FTP (SFTP)" boxes.
- Click on the "Test" button (to the right of the Login box) to make sure the connection works.
- Click "OK" to save the site definition.
